**Presented to UC Davis Workshop on Reusable and Disposable
Medical Textiles**

October 6, 2007

Medical Garment

- Garments used as barriers to prevent infection in hospitals
- In U.S., disposables are dominant, but in Europe, reusables are dominant
- Although each claim superiority, studies show that infection rates for both types are similar (2.2%¹ and 5.1-5.3%²)
- LCA can be used to compare both cradle-to-grave
- Schmidt (2000) – reusable surgical gowns have less energy, and raw materials consumption and less global warming potential

¹Garibaldi, R. A. et al. *The American Journal of Surgery* **1986**, 152, 505-509.

³Schmidt, A. European Textile Service Association **2000**.

²Bellchambers, J. et al. *European Journal of Cardio-Thoracic Surgery* **1999**, 15, 45-50.

LIFE CYCLE IS A TOOL

- DEVELOPED TO DEAL WITH COMPLEXITY OF ENVIRONMENT AND PRODUCTS
- HELPS US QUANTIFY, UNDERSTAND, AND SEEK IMPROVEMENT
 - IMPROVE ENVIRONMENT
 - IMPROVE ECONOMICS

LIFE CYCLE TOOLS

LIFE CYCLE STAGE

DECISIONS

IMPROVEMENT
ANALYSIS

IMPACT
ASSESSMENT

INVENTORY
ANALYSIS

- POLICY ISSUES
- SUSTAINABILITY
- MACRO
IMPROVEMENTS

- NEW
TECHNOLOGY
- POLLUTION
PREVENTION
- PROCESS ALTERNATIVES

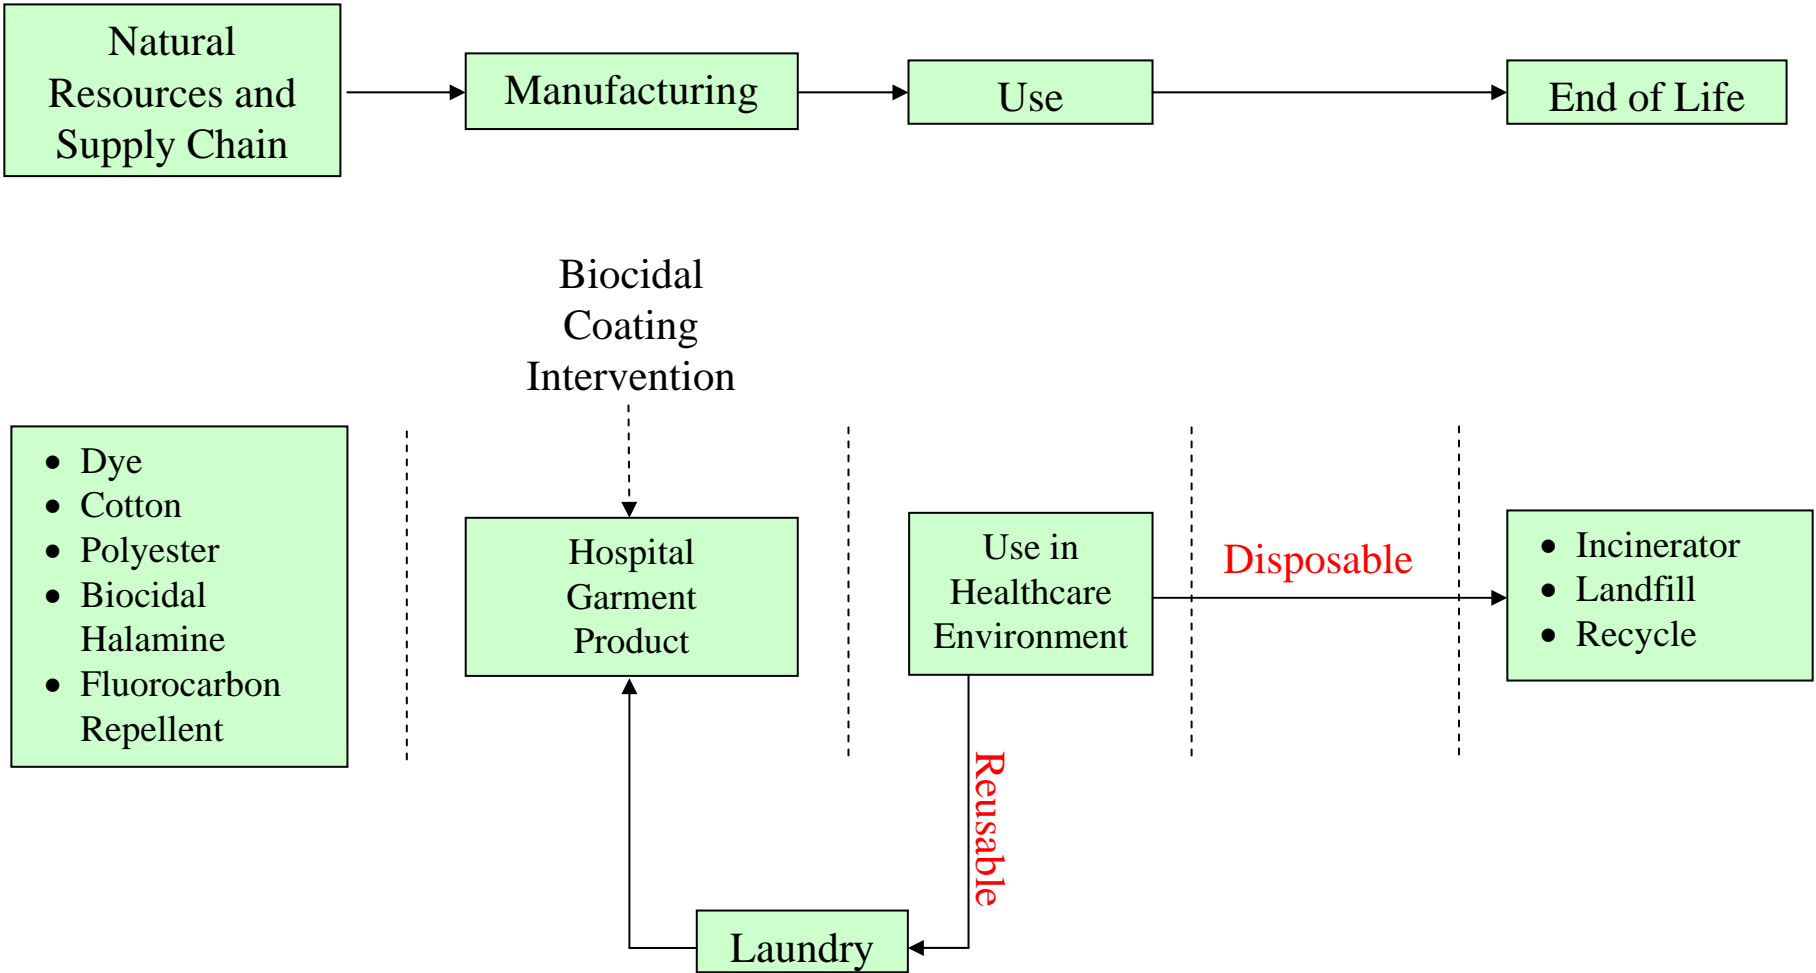

A LIFE CYCLE INVENTORY (LCI) IS A COMPLETE MASS AND ENERGY BALANCE TO DETERMINE

- INPUTS
- CHEMICAL EMISSIONS
- ENERGY NEEDS
- PRODUCTS FORMED
- MAJOR TECHNICAL VARIABLES AFFECTING THE LCI

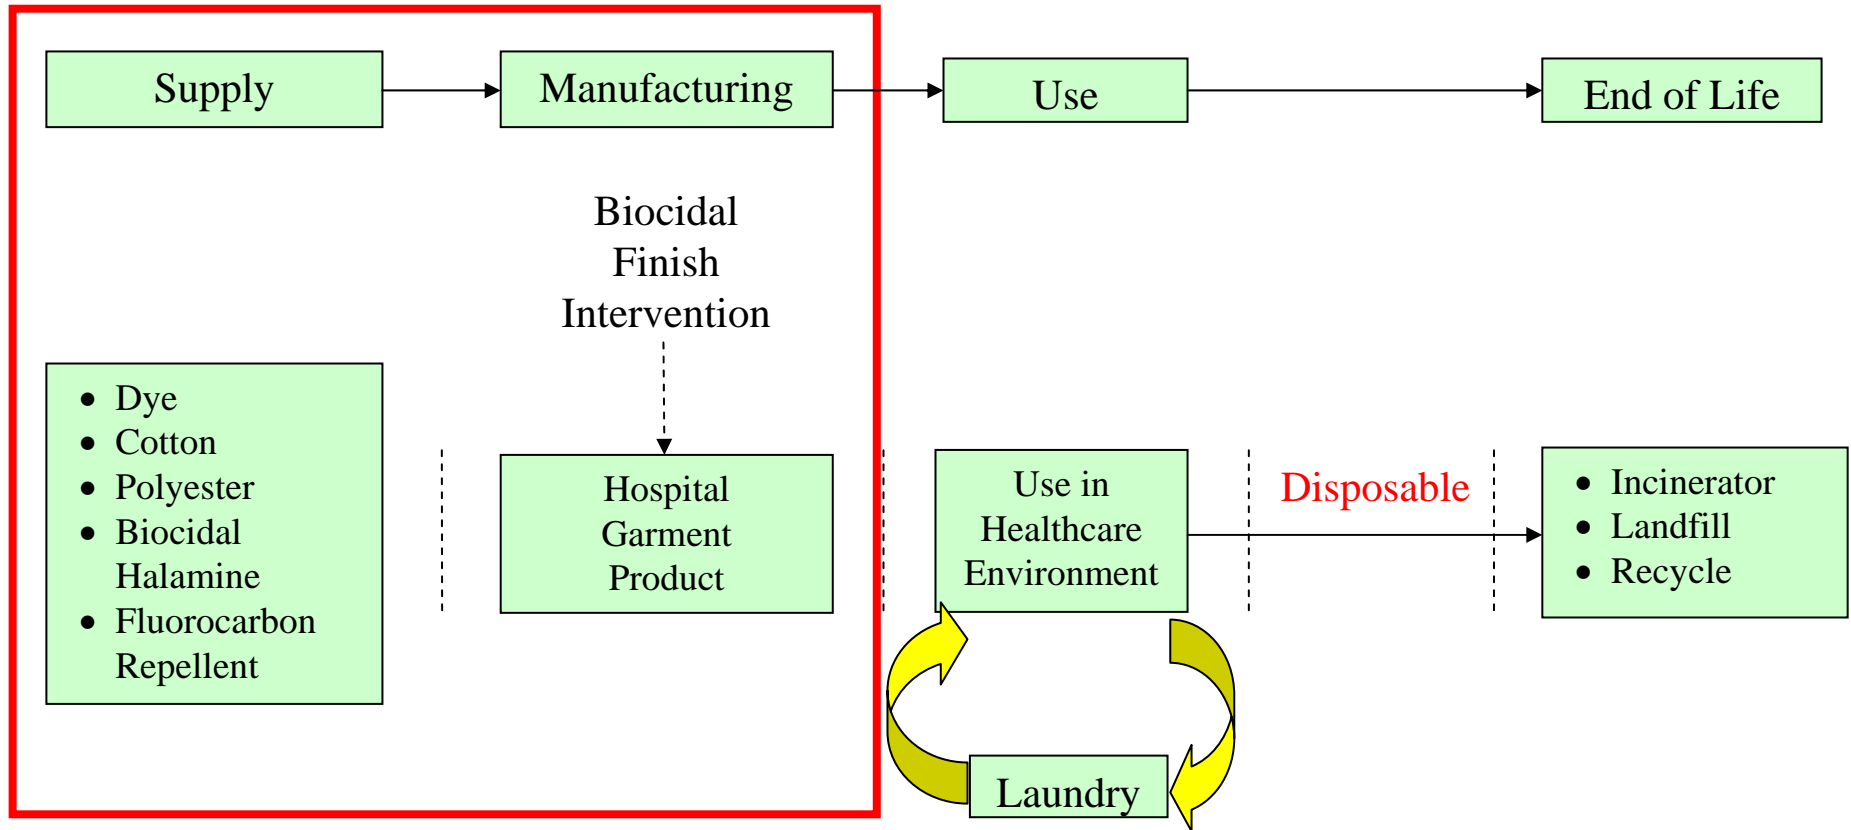

SOME BOUNDARY MUST BE SPECIFIED

LIFE CYCLE INVENTORY QUALITY

- TRANSPARENCY
- ENGINEERING PRINCIPLES OF MASS & ENERGY
- MULTIPLE VIEWS
- LOGICAL MECHANISM TO CHANGE
- EXPECTATIONS OF DECISION-MAKERS
- CRITICAL RELATION OF SYSTEM TO SUSTAINABILITY FACTORS

Project Scope

These LCI data are to be a part
of the UC Davis Database on
Medical Textiles

Functional Unit

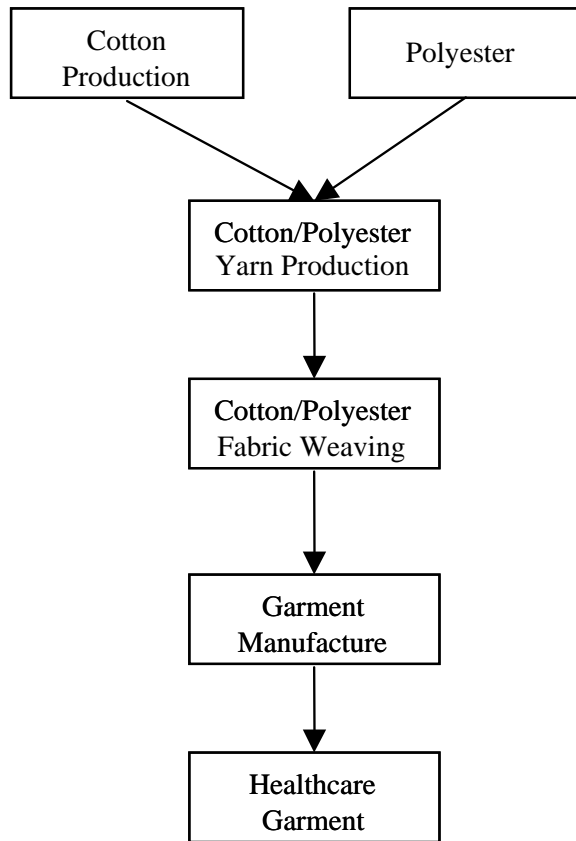

75 Disposable Patient Gowns
Polypropylene Spunlace Fabric

1 Reusable Patient Gown (used 75 times)
55% Cotton, 45% Polyester

Garment Production Diagram

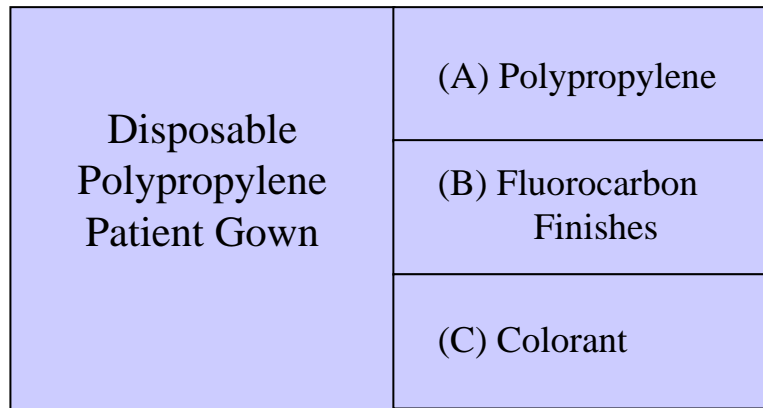

Reusable Garment Production Diagram

Disposable Garment Production Diagram

Gown Chemistry Tree

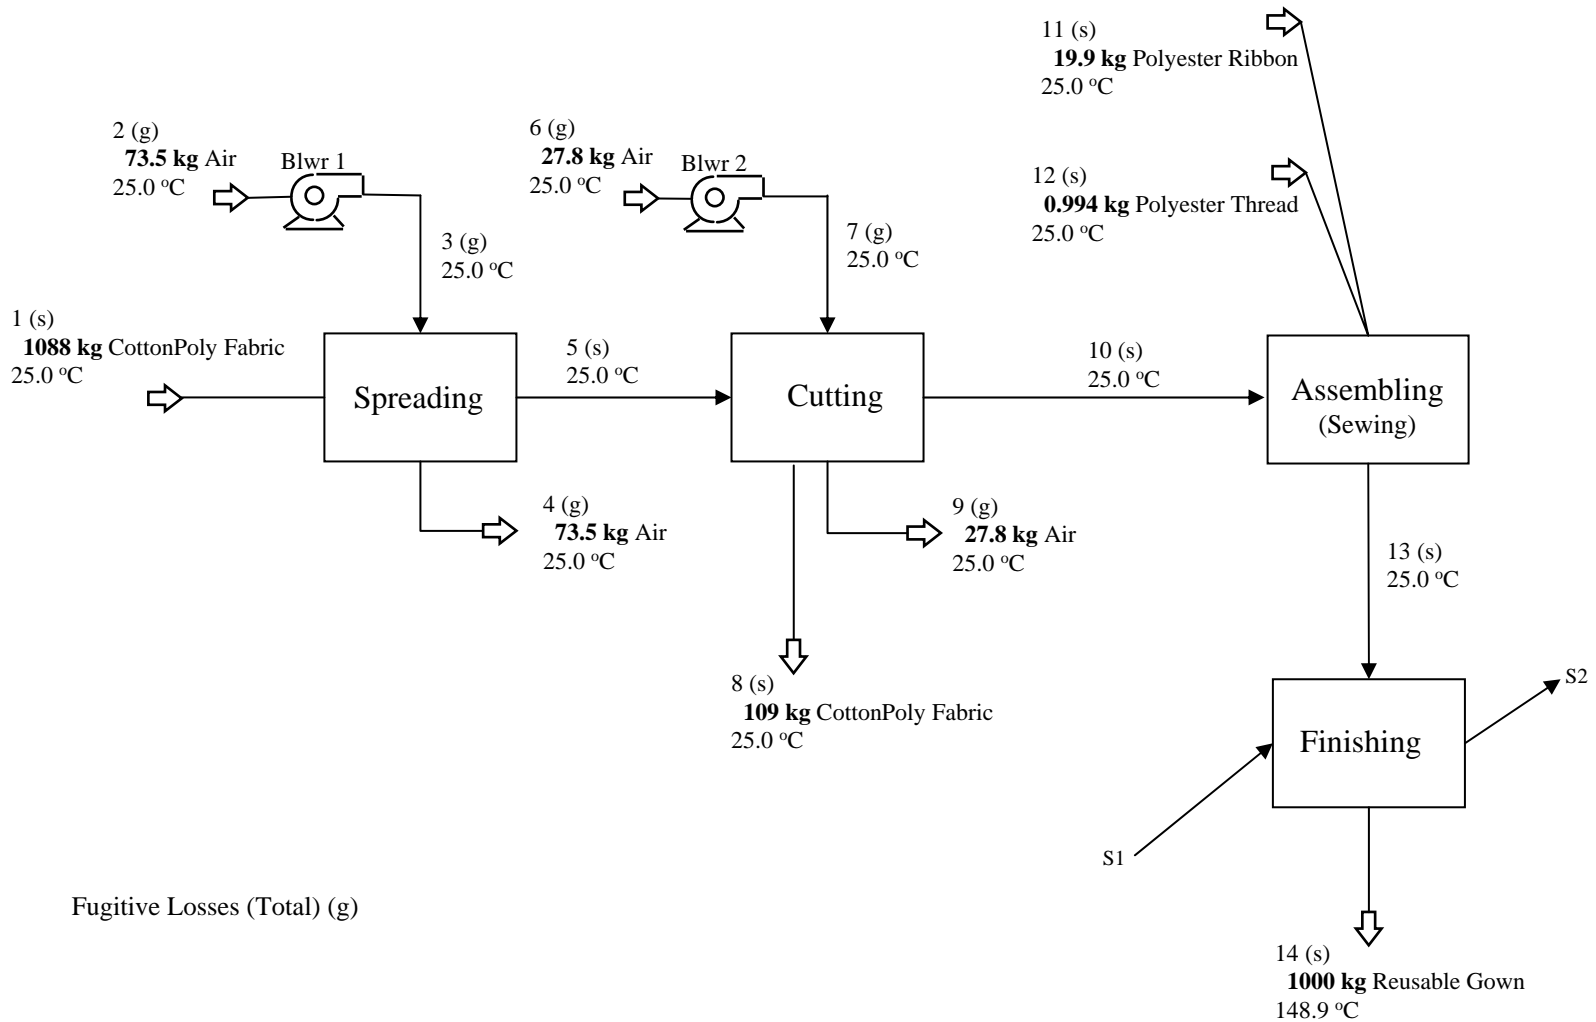

Level 1	Level 2	Level 3	Level 4
Polypropylene	Propylene	Naphtha	Crude Oil

1st	2nd	3rd	4th	5th	6th	7th	8th	9th	
Fluorocarbon repellent	Monomer	Perfluorooctyl acrylate copolymer	Ethyl acrylate	Acrylic acid	Propylene	Naphtha	Crude Oil		
				Oxygen	Steam	Water			
				Natural gas					
				Methanol	Steam	Water			
		Hexafluoro-2-propanol	Isopropanol	Propylene	Petroleum extraction/refinery	Water			
				Sulphuric acid	Sulphur trioxide	Sulfur	Petroleum extraction/refinery	Air	
				Water	Water				
				Propylene	Petroleum extraction/refinery	Water			
				Disopropyl Ether	Sulphuric acid	Sulphur trioxide	Sulfur	Petroleum extraction/refinery	Air
				Water	Water				
				Sulfuric acid	Sulfur trioxide	Sulfur	Petroleum extraction/refinery	Air	
				Hydrogen Fluoride	Sulfur trioxide	Oxygen	Petroleum extraction/refinery	Petroleum reserve	
				Fluorspar	Water				
				Water					

Level 1	Level 2	Level 3	Level 4	Level 5	
Copper phthalocyanine	Copper chloride	Chlorine	Sodium chloride	Salt rock	
		Copper	Copper Ore (unprocessed)	Water (untreated)	
	Phthalic anhydride	o-Xylene	Naphtha	Crude Oil	
		Oxygen from air	Air (untreated)		
	Sodium hydroxide	Sodium chloride	Salt rock		
		Water for rxn	Water (untreated)		
	Urea	Ammonia	Natural gas	Natural gas (unprocessed)	
			Nitrogen from air	Air (untreated)	
			Oxygen from air	Air (untreated)	
		Carbon dioxide	Water for rxn	Water (untreated)	
			Natural gas	Natural gas (unprocessed)	
			Nitrogen from air	Air (untreated)	
	Oxygen from air	Air (untreated)			
	Water for rxn	Water (untreated)			

Reusable Gown PFD

Reusable Gown LCI Summary

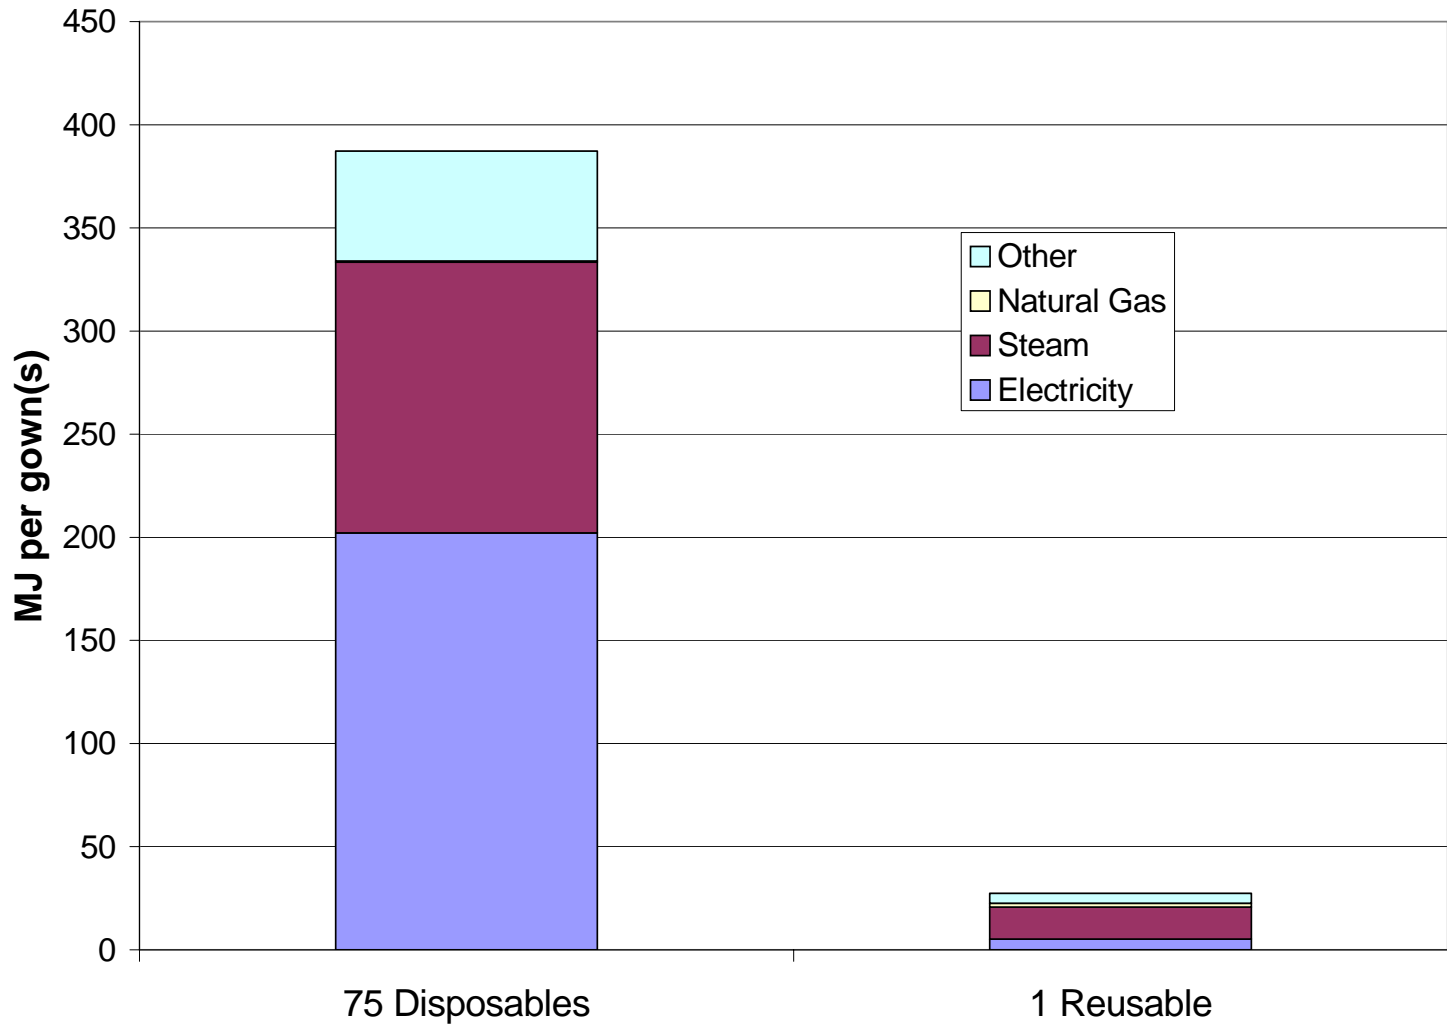

Inputs							
Input UID	Input Name	Input Flow	Input purity	Units	Comments		
UIDCottonPolyFabric	CottonPoly Fabric	1088		[kg/hr]			
	Total	1088		[kg/hr]			
Non-reacting inputs							
UID	Name	Flow	Purity	Units	Comments		
132259-10-0	Air (oxygen)	101		[kg/hr]			
	Total	101		[kg/hr]			
Ancillary inputs							
UID	Name	Flow	Purity	Units	Comments		
UIDPolyribbon	Polyester Ribbon	19.9		[kg/hr]			
UIDPolythread	Polyester Thread	0.994		[kg/hr]			
	Total	20.9		[kg/hr]			
Products							
Product UID	Product Name	ProductFlow	Purity	Units	Comments		
UIDReusableGown	Reusable Gown	1000		[kg/hr]			
	Total	1000		[kg/hr]			
Benign Outflows							
UID	Name	Flow	Purity	Units	Comments		
132259-10-0	Air (oxygen)	101		[kg/hr]			
	Total	101		[kg/hr]			
Chemical Emissions							
Emission UID	Emission Name	Gas Flow	Liquid Flow	Solid Flow	Solvent Flow	Units	Comments
UIDCottonPolyFabric	CottonPoly Fabric	0	0	109	0	[kg/hr]	
Totals		0	0	109	0	[kg/hr]	

Mass Balance		
Total inputs	1210	
Total outflows	1210	
Net input	1.10e-4	
Energy use		
Energy type	Amount	Comments
electricity	173	[MJ/hr]
heating steam	324	[MJ/hr]
Net input requirement	497	[MJ/hr] Net of energies input to system
Net energy	497	[MJ/hr] Net input requirement - potential recovery

Energy & Resource Consumption (per 1000 gowns) Cradle-to-gate

	Disposable(0.06 kg)	Reusable(0.23 kg)
Total, Energy, MJ	5162	27 380
Electricity, MJ	2695	5210
Steam, MJ	1750	15550
Natural Gas, MJ	6.83	1820
Other, MJ	711	4790
Natural Resource Energy, MJ	12,000	42,700
Total, Resources, kg	255	1394
Natural Gas, kg	50	308
Crude Oil, kg	48.4	423
Coal, kg	130	252
Other, kg	0	15.8
Mineral rock, kg	19.6	128
Water, kg	531	799 000

Energy for 75 Disposables versus 1 Reuseable

Biocidal
Coating
Intervention

- Dye
- Cotton
- Polyester
- Biocidal Halamine
- Fluorocarbon Repellent

Hospital

Product

Use in
Healthcare
Environment

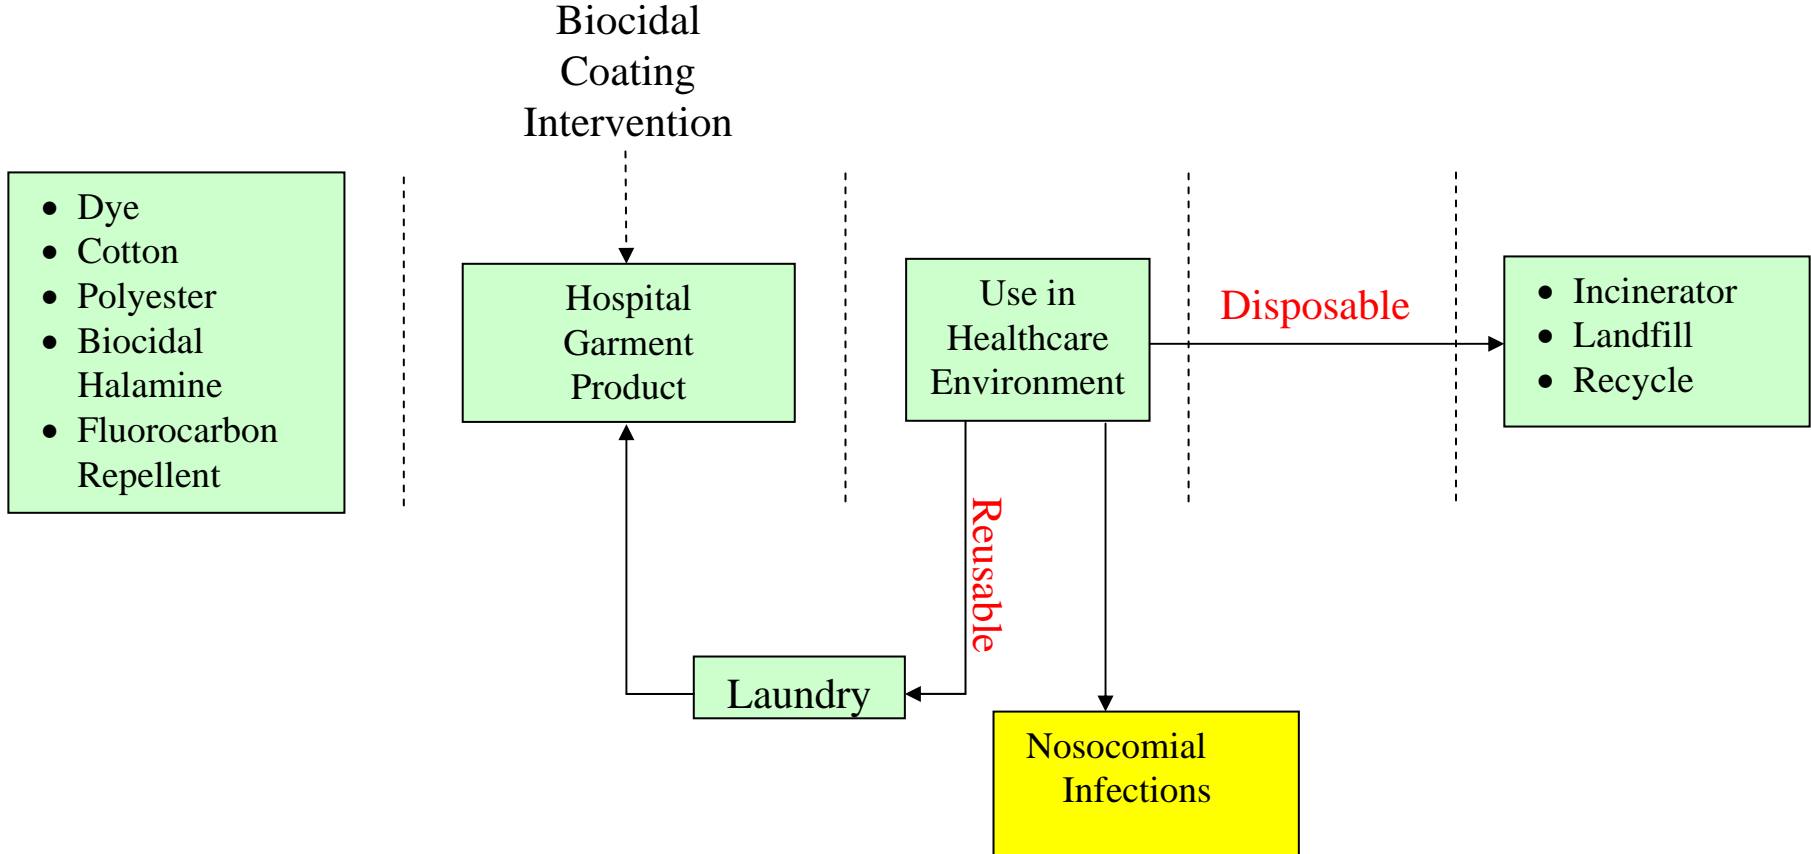

Disposable

- Incinerator
- Landfill
- Recycle

Laundry

Reusable

Nosocomial
Infections

Magnitude of Hospital Infections

Citation	Nosocomial Infection Rate, patients infected per 100 admitted patients
Fox, et. al, 1974	5
CDC, 2005	6
Wenzel, et. al, 1995	5-10
Pittet, et. al, 2004	9-10

- Annual Hospital Admissions in the US, about 32 million persons
- Infections acquired in hospitals (around 6%) or 1.9 million persons. Significant variation among hospitals
- About 33% of these are cited as preventable (Pittet, D., et. al., 1999) or about 640,000 patients per year. Infection Control Offices are established.
- An estimated 4% - 5% of those infected die or 86,000 patients

CURRENT STATUS & FUTURE TASKS

- Life cycle gate-to-gates of supply chain - database
- Laundry versus supply chain of disposable – the first life cycle tradeoff
- Nature of the hospital environmental footprint
- Additive effects of including life cycle for nosocomial infections – the second life cycle tradeoff
- Improvements in location of biocidal interventions to lower health impacts
- These life cycle inventory data can be used in larger numbers of life cycles for other medical textiles and for sustainability standards
